PROFESSIONAL SUMMARY

Software Engineer (Programmer Analyst Trainee) at Cognizant, working on Java microservices, Couchbase (NoSQL) and Angular for American Airlines. Also building Inventra, a multi-tenant, offline-first pharmacy ERP with Spring Boot, React and TypeScript.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, C#, C, C++, SQL, Shell Script, HTML, CSS
Frameworks & Libraries: Spring Boot, Angular, React, Tailwind CSS, ASP.NET, Entity Framework, Tauri
Databases: Couchbase (NoSQL), PostgreSQL, MySQL, MS SQL Server, SQLite, Flyway
Tools & Platforms: Docker, Git, GitHub, Linux, Maven, pnpm, Turborepo
Concepts: Microservices, REST APIs, Java RMI, JWT Authentication, Multi-tenancy, Offline-first Sync, Agentic AI, Data Structures and Algorithms, Object-Oriented Programming

WORK EXPERIENCE

Programmer Analyst Trainee, Cognizant **Nov 2025 - Present**
Client: American Airlines | Project: Mercury Rewrite

- Contribute to Mercury Rewrite, the migration of a legacy Java RMI, in-memory architecture to Java microservices backed by a Couchbase data layer. Joined the project in March 2026 after completing a 3-month Java and Angular training program.
- Delivered a proof of concept that retrieves 250K fares from a 42-million-record Couchbase dataset and renders them in the UI, enabling sorting across all 40-50 fare columns, which database-side sorting could not support.
- Built an agentic mesh proof of concept by extending an open-source repository with custom AI agents, now used by the team to accelerate development.
- Owned end-to-end development of the Marketlist feature and led the design of its draft-table approach.
- Created ops-core, a reusable framework born from the Marketlist design, now adopted by other modules of the project.
- Received written recognition from the Project Manager for the quality of delivery as a fresher.

Intern, BISAG-N, Gandhinagar, Gujarat **Feb 2025 - May 2025**

- Built a quantum-resistant VPN by integrating Kyber (KEM) and Dilithium (signatures) into StrongSwan using liboqs.
- Modified IKEv2 negotiation and the crypto backend for post-quantum key exchange and authentication; configured and tested tunnels with swanctl.

PROJECTS

Inventra - Pharmacy ERP (Personal Product) **Aug 2026 - Present**
Java 17, Spring Boot 4, PostgreSQL, React, TypeScript, Tauri, Docker

- Designed and built the whole system alone: a multi-tenant REST API backend (17 domain modules, 19 Flyway migrations, JWT authentication) plus a React and TypeScript web app and a Tauri desktop app.
- Implemented POS billing, FEFO batch-expiry handling, GST invoicing, purchasing, inter-store transfers and Razorpay subscription billing.
- Built offline-first sync: the desktop app queues sales and purchases in local SQLite and the backend applies them idempotently when the connection returns.
- Organised the frontend as a pnpm and Turborepo monorepo with 9 shared packages, so web and desktop run the same UI through a runtime adapter.
- Covered by 267 backend tests (all passing) and Vitest suites for the frontend packages.

Crime Vault **Jan 2025 - Apr 2025**
.NET 8, C#, ASP.NET Identity, Entity Framework, MS SQL Server

- Built a secure, role-based criminal management system with team assignments, access-controlled dashboards and case management.
- Added internal team messaging with activity logging and secure file uploads, and laid groundwork for encrypted communication and multi-level approval workflows.

EDUCATION

Bachelor of Technology, Computer Science and Engineering **2021 - 2025**
Indus University, Ahmedabad, Gujarat | CGPA: 9.05

CERTIFICATIONS

Google Cybersecurity | Google AI Essentials | AWS Cloud Foundations | AWS Machine Learning Foundations
